

YOUR
CLINICAL DATA SHARING
JOURNEY
 THROUGH
 HOLLAND BLOORVIEW KIDS REHABILITATION HOSPITAL

Data Collection

When a client visits Holland Bloorview, their clinical information, known as **data***, is collected by their health-care practitioner as part of their electronic medical record.

*Data is any information about a client like their name, age or height for example.

Opt-Out

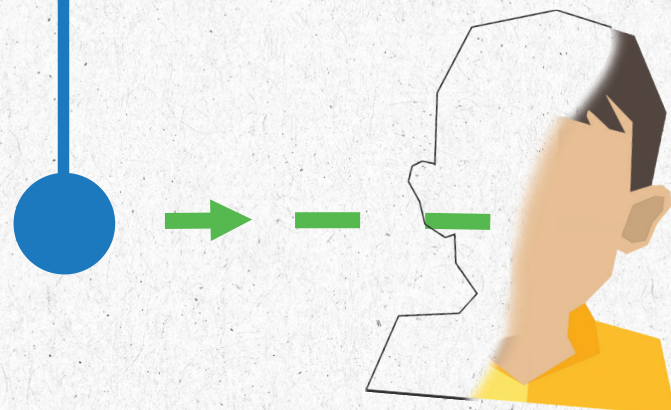

Not interested in sharing your clinical data? No problem! You can opt out by going to hollandbloorview.ca/datasharing

Data Storage

The client's clinical data is then stored in Holland Bloorview's secure electronic medical record called 'Meditech' to inform their care.

Data De-Identification

Holland Bloorview removes any personal information about a client like their name so it cannot be traced back to them. This de-identified data is then stored in a separate and secure computer server or 'vault'.

Data Sharing

De-identified data is shared with authorized data consortiums and research partners so they can develop new pediatric innovations and better treatments. Together, we're building a better future for kids and their families!
