Concussion and neurodevelopmental disorders: Exploring experiences and access to healthcare services

Principal Investigator: Dr. Shannon Scratch

REB #: 0771

Have you or your child been diagnosed with a concussion and neurodevelopmental disorder?

Consider participating in a research study to help us understand your experiences!

What is this study about?

We are interested in speaking to children and youth, caregivers, and clinicians about their experiences accessing or providing healthcare services to children and youth with a neurodevelopmental disorder (NDD) (e.g., ADHD, ASD, learning disability) who have experienced a concussion.

Who can participate?

- Children and youth (aged 6-21 years of age) with a NDD who have experienced a concussion and their caregivers.

What is involved?

- This study requires an interview with you that will last up to 1.5 hours
- You can also participate in an optional pre-interview session to meet the research team

Potential Benefits:

Participation in this study will help us understand the healthcare experiences of children and youth with a NDD who have experienced a concussion, their caregivers, and clinicians. It will also help to identify areas for enhanced care and future interventions.
